

LAWN MIXTURES

All containing the very best STRI recommended varieties

GENERAL PURPOSE

General Purpose Lawn Seed Mixture Composition

We only use the highest quality grasses in our mixtures.

55%	Escapade Perennial Ryegrass
45%	Joanna Chewings Fescue

- Our General Purpose Lawn Mixture will give you a superb, first-class lawn, with the added advantage of being hard wearing and suitable for children to play on.
- General Purpose is also the mixture to choose if you are seeding a cricket square or a tennis court.
- Our General Purpose Lawn Mixture is a very hard-wearing lawn with a thick, dense sward. It grows slowly so that both you and your mower will last longer!

SHADED LAWN

Shaded Lawn Seed Mixture Composition

We only use the highest quality grasses in our mixtures.

35%	Corail Creeping Red Fescue
20%	Joanna Chewings Fescue
20%	Samanta Slender Creeping Red Fescue
15%	Tetris Smooth Stalked Meadow Grass
10%	AberRoyal Browntop Bent

- Growing a good lawn in shady or low-light conditions is not easy. Our shaded lawn is designed for exactly this situation and is suitable for sowing under trees and in shady areas, near high walls or houses.
- Shady areas will not only be short of light, but also short of water and other nutrients. It is important to ensure that the lawn has sufficient water and lawn food at all times.
- To secure a good, long-lasting lawn, rake all leaves off the lawn in Autumn to allow as much light as possible to reach the area.

ORNAMENTAL LAWN

Ornamental Lawn Seed Mixture Composition

We only use the highest quality grasses in our mixtures.

50%	Corail Creeping Red Fescue
40%	Joanna Chewings Fescue
10%	AberRoyal Browntop Bent

- Our ornamental lawn mixture is designed to be a top-class lawn with a 'bowling green' finish that will show off your home at its best.
- The mixture is also ideal for golfing and bowling greens, but is not suitable for heavy wear, for example from children playing.
- Achieving a superb lawn requires good management. Once established, it requires regular short mowing (5mm) and feeding with lawn fertiliser.
- To achieve the classic 'striped' lawn, mow with a roller mower.

COUNTRY GARDEN

Country Garden Mixture Composition

We only use the highest quality grasses in our mixtures.

15%	Linares Smooth Stalked Meadow Grass
25%	Javelin Slender Creeping Red Fescue
35%	Excellence Chewings Fescue
5%	Sefton Brown Top Bent
20%	UK-Native Wildflower Mix

- Containing the very best STRI recommended smooth-stalked meadow grass, slender red fescue, chewings fescue and brown top bent together with a wild flora mix of native UK wildflowers.
- Country Garden contains 20% UK-native wildflowers. It will create an area of natural meadow that will not only look good but will also be a haven for wildlife such as birds, butterflies and bees.
- The Country Garden mixture contains the following wild flowers:
- White Champion (10%), Self Heal (15%), Lady's Bedstraw (10%), Corn Cockle (15%), Corn Camomile (7.5%), Meadow Buttercup (5%), Red Champion (10%), Oxeye Daisy (10%), Corn Poppy (10%), Corn Marigold (5%), Ribwort (2.5%).
- Note that Country Garden is 5 times (approx.) more concentrated than some other mixtures that we sell, so you need **less** to cover the same area. As a guide, each kilo will cover an area 100 m² (i.e. an area 10m x 10m).
